

You can't get greener than natural gas.

Using natural gas instead of oil products or coal has many advantages. Natural gas burns 43 percent cleaner than coal and 28 percent cleaner than oil, and is the most environmentally responsible conventional energy source currently available. Natural gas can significantly reduce dangerous greenhouse gas emissions that contribute to acid rain and global warming. By using natural gas, we dramatically cut air pollution and improve air quality for the world, all while reducing our dependence on foreign resources. As you can clearly see, the best solution for environmental challenges ahead is natural gas.

The winning team for Texas.

Chesapeake Energy embraces our role as the largest independent producer of natural gas. We recognize that natural gas does more than fuel our energy needs – it also powers our economy. Our goal in the Barnett Shale is to become your operator of choice in both rural and urban environments through a focus on safety, open communication, community education, advanced technology, industry expertise, environmental sensitivity, exceptional results, and good corporate citizenship. **Together, we all win.**

The Barnett Shale

We All Win

The Fort Worth Basin sits atop an opportunity of unbelievable magnitude — the Barnett Shale, one of the nation's richest natural gas deposits. And Chesapeake Energy is your partner in bringing to the surface the advantages of clean-burning, efficient natural gas, as well as increased tax revenue, new jobs and strong business growth. The undisputed urban pioneer, we are the country's largest independent producer of natural gas and the nation's most active natural gas driller. Together with Texans like you, we are committed to fueling the future. The economy wins. The environment wins. Our community wins. You win. Together, we all win.

An exciting new day is arriving in Texas history.

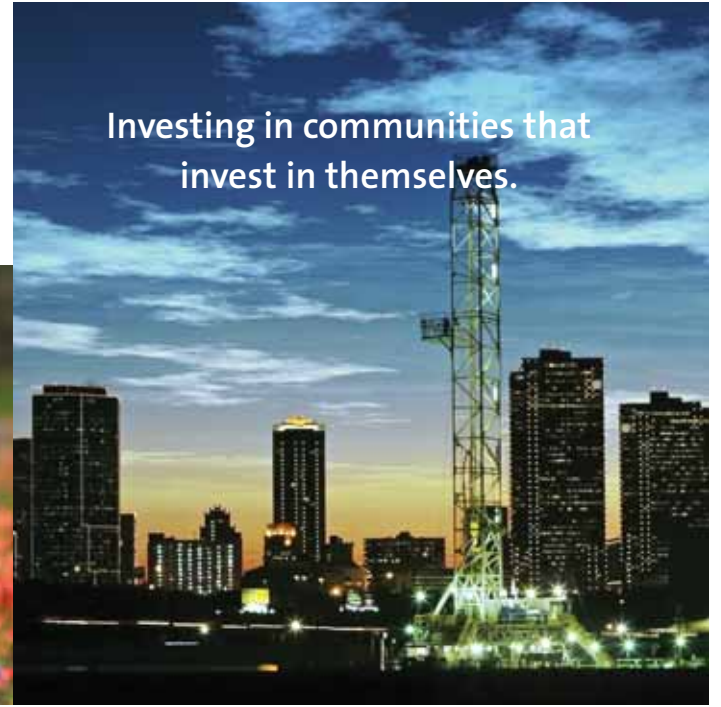

Leading the energy boom of our generation.

Taking care of what's important to Texans.

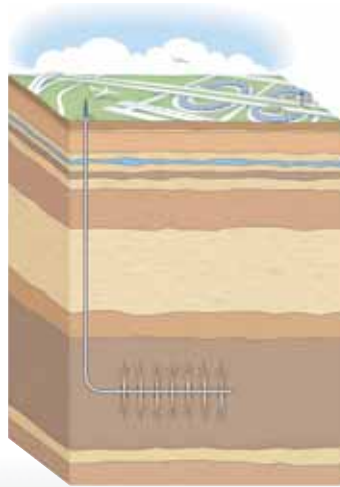

Investing in communities that invest in themselves.

At DFW International Airport, a new era of economic prosperity is taking off.

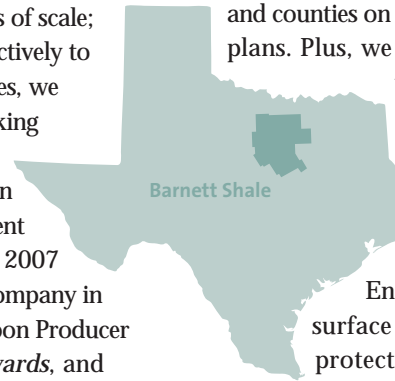

We're breaking new ground and making history by drilling more than 300 natural gas wells directly underneath one of the world's busiest airports. This represents the single largest undrilled natural gas lease in the entire Barnett Shale. It's also the first natural gas exploration at a major international airport. And, our DFW Airport drilling will set a new industry standard for minority subcontractor and minority investor participation.

Continually improving 3-D seismic exploration and horizontal drilling technologies enables us to produce minerals in urban environments that were previously inaccessible.

Chesapeake is one of the most successful U.S. energy companies exploring and producing natural gas from shale plays. Our strategy is simple: we're exclusively domestic and exclusively onshore, growing through a balance of drilling and acquisitions. We consolidate regionally to achieve economies of scale; we focus on natural gas and we work proactively to mitigate risk. With 7,000 talented employees, we operate our own drilling, pipeline and trucking companies to ensure quality control from beginning to end of a well cycle. We offer an entrepreneurial and experienced management team who led Chesapeake's recognition in 2007 by *Forbes* as the "Best Managed Energy Company in the U.S." We were also named "Hydrocarbon Producer of the Year" at *Platts Global Energy Awards*, and recognized as one of *FORTUNE* 100 Best Companies To Work For® in 2008. Chesapeake is at the forefront of the industry with an exceptional 98 percent drilling success rate.

Our technological superiority in 3-D seismic interpretation, unconventional reservoir analysis, and deep vertical and horizontal drilling capabilities allows us to excel during this 21st century energy boom.

Safety — and security — first. A dedication to responsible urban drilling also means protecting the places where we live, work and play. That's why we continually review and improve our safety training programs. We educate and partner with municipalities and counties on comprehensive emergency response plans. Plus, we incorporate the most advanced technologies to ensure the safety of every resident, such as our remote telemetry that shuts down wells quickly and efficiently, specialized lightning arresters, ASME (American Society of Mechanical Engineers)-coded vessels to prevent surface blowouts, and cement casings to protect our natural groundwater sources. Chesapeake operates within the strictest safety guidelines provided by the Railroad Commission of Texas, and is proud to have an unmatched safety record in the industry.

Chesapeake operates more than 5,400 natural gas wells throughout Texas, and has Barnett Shale offices in Cleburne, Joshua, Fort Worth and DFW Airport.

More than just efficiently fueling our energy needs, natural gas powers our economy.

Natural gas drilling and production throughout North Texas is contributing to a robust economy in Tarrant, Johnson, Dallas and surrounding counties. According to noted economist Ray Perryman, Barnett Shale drilling will generate billions of dollars in economic output and thousands of new jobs in North Texas each year. Chesapeake also makes a positive impact through a variety of philanthropic support programs such as sponsorships, scholarships and neighborhood improvement programs. As our involvement in the Barnett Shale expands, so will the enrichment of future Texas community and economic developments.
